

WHAT IS CLAIMED IS:

1. An vending machine, comprising:

commodity carrying-out means for storing commodities and carrying out a commodity;

commodity carrying-out control means for executing carrying-out of the commodity from the commodity carrying-out means based on insertion of coins or a paper money and pushing a commodity selecting button;

prize carrying-out means for storing prizes different from the commodities and carrying out a prize;

prize carrying-out control means for executing carrying out of the prizes from the prize carrying-out means when a predetermined condition is satisfied; and

mode selecting means for selecting any one of a mode which makes it possible to carry out the commodity and the prize and a mode which makes it possible to carry out only the commodity.

2. The vending machine according to claim 1,

wherein the predetermined condition related to carrying-out of the prize is winning a prize in the lottery at a time of selection of the commodity, and

when said condition is satisfied in a state in which the mode which makes it possible to carry out the commodity and the prize is selected, the prize is carried out with the selected commodity.

3. The vending machine according to claim 1,

wherein the predetermined condition related to carrying-out of the prize is selecting of a special commodity at a time of selection of the commodity, and

when said condition is satisfied in a state in which the mode which makes it possible to carrying out the commodity and the prize is selected, the prize is carried out with the selected commodity.

4. The vending machine according to claim 1,

wherein the predetermined condition related to carrying-out of the prize is any one of selecting a special commodity at a time of selection of a commodity, and winning a prize in the lottery at a time of selection of the commodity other than the special commodity, and

when any one of said conditions is satisfied in a state in which the mode which makes it possible to carry out the commodity and the prize is selected, the prize is carried out with the selected commodity.

5. The vending machine according to claim 1,

wherein the predetermined condition related to carrying-out of the prize is an inserted amount of money  $\geq$  a prize price, and pushing a prize selecting button;

when said condition is satisfied in a state in which the mode which makes it possible to carry out the commodity and the prize is selected, only the prize is carried out; and

when a condition of the inserted amount of money  $\geq$  a commodity price and pushing the commodity selecting button is satisfied, only the commodity is carried out.

6. The vending machine according to claim 1,

wherein the prize carrying-out means has a transparent plate, which is capable of making an inside of a prize housing chamber visible, at a front face, and

the prize carrying-out means is mounted inside a main door so that the transparent plate is exposed outside through an opening of the main door.

7. The vending machine according to claim 6,

wherein the prize carrying-out means has a prize output port at the front face, and

the prize carrying-out means is mounted inside the main door so that the prize output port is exposed outside through an opening of the main door.

8. The vending machine according to claim 6,

wherein the prize carrying-out means has a prize carrying-out port at a lower part, and

the prize carrying-out means is mounted inside the main door so that the prize carrying-out port communicates with a commodity output port of the main door.

9. The vending machine according to claim 6,

wherein the prize carrying-out means has a prize selecting button at a part exposed from the main door.

10. The vending machine according to claim 1,

wherein the prize or sample thereof is exhibited in a sample chamber of a main door.

11. The vending machine according to claim 10,

wherein the prize carrying-out means has a prize selecting button at a part exposed from the main door.

12. The vending machine according to claim 10,

wherein the commodity selecting button corresponding to the prize or the sample thereof exhibited in the sample chamber is utilized as a prize selecting button.

13. The vending machine according to claim 1,

wherein the commodity carrying-out means is constructed by at least one of a plurality of commodity carrying-out means, and

the prize and its package include shape which is capable of being stored in the commodity carrying-out means.

14. The vending machine according to claim 13,

wherein the prize or the sample thereof is exhibited in a sample chamber of a main door, and

the commodity selecting button corresponding to the prize or the sample thereof exhibited in the sample chamber is utilized as a prize selecting button.
